## Hospital Bed Halo Rails

The Halo Safety Ring is a patented bed safety device that allows the user to grab the Ring at any angle. The Halo can be installed on a Homecare bed or can be ordered with height adjustable stands to work with a traditional mattress and box spring system. The Halo rotates 90° in either direction to accommodate different user positions and allows ease of bed exit. The Halo exceeds the HBSW and FDA's dimensional guidelines against bed entrapment.
